Columbia Tech Tip # 119:

Clear polyurethane acrylics are a low build, 2K system that offer an unparalleled look. This two coat system means less time in the booth and faster production time. The first coat acts as the sealer and the second as the topcoat. The final results are based on preparation of substrate, environmental conditions and the application cycle with the proper use of product. Product data sheets are available to aide in proper catalyzation, reduction & usage.
